

Roadway

Find every pothole. Fix the right ones first.

Smart road-condition
intelligence for
municipalities

Roadway turns everyday driving into a **live, severity-ranked map** of your road network — then puts your crews on the repairs that matter most.

No new hardware. No costly surveys. Just the vehicles already on your streets, working for you.

See your roads in real time

Phones in your fleet automatically detect potholes & speed bumps as crews drive — GPS-tagged and mapped instantly.

Fix the worst first

Every hit is ranked by impact severity and report frequency, so limited budgets target the roads that need it — not the loudest complaints.

Dispatch & prove the work

Draw an area, assign a crew, and track each job from Assigned → In Progress → Completed → Verified — with printable work orders.

Runs on what you have

A web dashboard on any Windows PC, a field app for iPhone, and live data your whole team sees at once.

HOW IT WORKS

1

Drive

Staff run the Roadway app in the background on normal routes.

2

Detect

Sensors flag & classify potholes and speed bumps, ranked by severity.

3

Dispatch

Your team reviews the map, assigns crews, and tracks repairs to done.

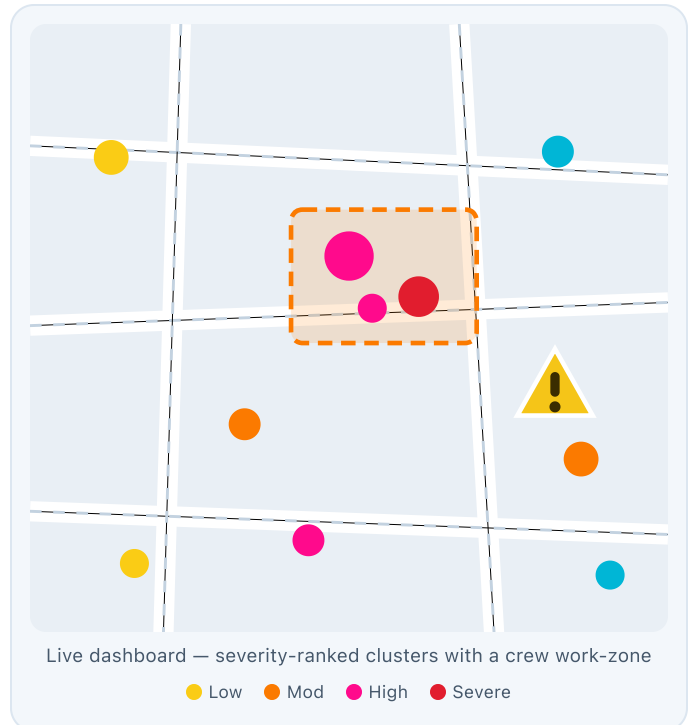

Why municipalities choose Roadway

- ✓ **Lower liability.** Catch and repair hazards proactively — before they become vehicle-damage claims.
- ✓ **Defensible budgets.** Decide with objective severity data, not anecdotes — and show the public where dollars went.
- ✓ **No survey costs.** Your network gets mapped continuously, for free, as crews drive their routes.
- ✓ **Resident trust.** Faster, visible response — and a clear record from report to verified fix.

WHAT ROADWAY DETECTS

Potholes Speed bumps Impact severity GPS location
Lane / heading

From the first report to a **verified repair** — one system, one source of truth for your road network.

See it on **your** streets — request a demo.
